

The Diagnostic Wax-up

Show your patients what Cosmetic Dentistry can achieve!

Esthetic dentistry is, by its very nature, a very visual endeavour. Diagnostic Wax-ups, part of Aurum Ceramic's exclusive **ACCES™ (Advanced Cosmetic Communication and Esthetic System)**, create a clear blueprint for unsurpassed esthetics and functional results.

Powerful Patient Communication Tool

- Natural-looking, three-dimensional representation of final case.
- Illustrates current situation and how more esthetic smile can be achieved.
- Shape and contour of the teeth easily discussed with patient.
- Dramatically increases treatment acceptance rates.

Visual Aid for Adequate Tooth Preparation

- Obtain a visual understanding of tooth reduction requirements, reducing preparation appointment time in the operator.
- Matrices serve as a valuable check to ensure adequate preparation.
- Pre-plan location and contour of any gingival tissue recontouring.

Template for Final Restorations

- Assists in creating a smile design that assures predictability in the mouth.
- Allows careful evaluation of function, anterior guidance and cuspid rise.
- Provides a template from which both the preparation and the temporary index can be fabricated.

Allows Quick Fabrication of Outstanding Temporaries

- Aurum Ceramic will provide a Temporary Stent from the Diagnostic Wax-up.
- Temporaries that mimic the final restorations can be created within ten minutes.
- Allows the patient a few days to evaluate the shape and function of their "new teeth".

Build Your Practice With Aurum Ceramic
