

Saddle-Lock® “Hidden Clasp” Partial Dentures... the aesthetic answer!

Now, partial denture wearers can have a true “natural look” with Saddle-Lock®. Designed to hide the unsightly metal clasps used with traditional partials, Saddle-Lock gives you a vastly improved “metal-free” smile that looks great!

Smile, Talk and Chew with Greater Confidence

Saddle-Lock’s “Hidden Clasp” system creates a superior partial denture that actually fits better and is easier to insert versus conventional designs. Engineered to exacting standards, they reduce wear on your remaining teeth, protecting them and your gums.

Crafted Using Proven Vitallium Alloys

Every Saddle-Lock partial is created from Vitallium® 2000 premium chromium alloy, the industry standard for strength, biocompatibility and light weight. This means that your partial can be smaller and more comfortable while still guaranteeing superior fit, function and years of trouble-free wear.

Ask your dental practitioner for more details on whether a Saddle-Lock® partial denture is right for you.

As the photographs show, in the old design, metal is visible to others when smiling. With the modern Saddle-Lock design, no metal is visible making the partial virtually undetectable.
