PROSTHESIS EDUCATOR

26.534 PROSTHESIS EDUCATOR with golden prosthesis

26.535 PROSTHESIS EDUCATOR with chrome prosthesis, a Maryland Bridge replaces the three unit chrome bridge and facings.

- Upper and lower resin articulated master models with removable teeth, mounted on a hinge.
- 15 different types of crowns, bridges and partial dentures, all adaptable to the master model.
- Designed to show patients the various types of prosthesis available and an invaluable aid to guide them in their choice of treatment most suitable to their individual needs.
- The demonstration prepared by the prosthodontist should represent as closely as possible his patient's dentition, the various types of prosthesis suitable for solving the problems are then fitted to the master model. Not only the patient will see and eventually touch the final result but comprehend the complete operation, thus saving time and money for both parties.
- The Prosthesis Educator, beautifully presented in an attractive plexiglass case, is a must for the modern dental surgeon who is using the latest techniques and needs the necessary technical backing.

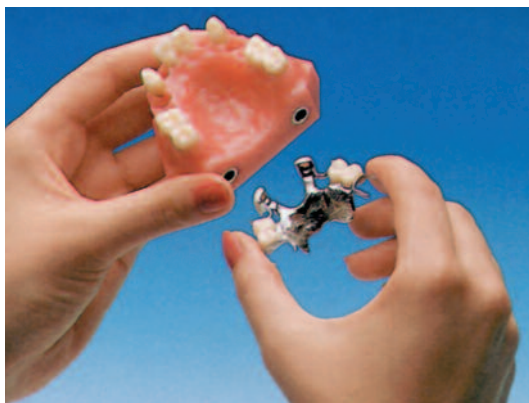

The Prosthesis of the Educator Kit

• **Acrylic denture with 6 teeth standing**

- One gold inlay

Anatomical Model and Teeth for Study Purposes

Set of 16 anatomical teeth

8 anatomical teeth upper left side n° 21 to n° 28

8 anatomical teeth lower left side n° 31 to n° 38

26.595 Scale 3,5

The teeth are representative of the morphological characteristics of natural teeth. They facilitate the study of the anatomy of the teeth.

These teeth are for universities, dental laboratories or patient education.

Carving initiation set

26.596 10 Morphological posterior teeth

26.598

26.597

Models for teeth carving training

26.597 Upper and lower models, one tooth out of two without occlusal facing

26.598 Upper and lower models, one tooth out of two with stump

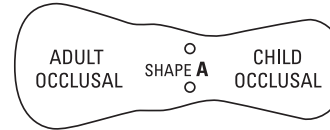

Case Presentation

Aurum Ceramic/Classic Photographic Mirrors

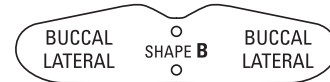

- Available in 7 sizes, each mirror has one reflective surface, coated with nickel chromium on a copper base, to provide a clear reflected image with natural colour.
- Alloy hardened base will not shatter, chip or break if dropped.
- Smooth beveled edge provides comfort.
- Each mirror has two different shaped sides for different photos.
- Mirrors are angled in the middle to allow them to be held easily while keeping hands out of the camera view.
