About the Speaker

Our clinician, **Walt Pfitzinger, DDS, MS**, began 35 years ago as a solo pediatric dentist. His practice evolved into a group with four offices and consists of five general dentists, three pediatric dentists, an orthodontist, an oral surgeon, and an anesthesiologist.

A graduate of St. Louis University School of Dentistry, Dr. Pfitzinger received his advanced degree in pediatric dentistry from Marquette University. Always a student, Dr. Pfitzinger continues to improve his practice and teaching. He actively participates in courses led by world-renowned specialists in appliance therapy both in North America, Europe and Asia.

He brings to this course first-hand knowledge on what works and what doesn't with explanations and examples. Although removable appliances are an important adjunct to early orthodontic treatment and minor movement in adults, he also practices using fixed Straight Wire mechanics.

Teaching Methods:

Dr. Pfitzinger's entire presentation will be illustrated with photographs of the patients' treatment from beginning to end.

In addition, Dr. Pfitzinger has developed a unique series of diagnostic flow charts that will help guide the practitioner to select the cases that can easily be treated and to refer those cases that cannot be easily and quickly managed in a general practice.

Minor Tooth Movement for Children and Adults

This one-day seminar will enable the practitioner to successfully treat many children and adults who present with simple problems that can be treated in a short period of time without the use of comprehensive fixed appliance therapy.

Course Objective

YOU WILL LEARN:

- How to treat anterior crossbites in the primary and mixed dentition
- When and when not to treat posterior crossbites (and how to select the perfect appliances for given situations)
- How to treat orthodontic relapse in your adult patients without full banding and bonding
- How to correct minor tooth position problems in preparation for implants or prosthetic appliances (such as tipped molars)
- How to correct ectopic eruption of 6-year molars in the mixed dentition
- When and how to approach space maintenance children (there is new thinking on the necessity of space maintainers)

I. Introduction

- a. Why the general or pediatric dentist needs to be involved in appliance therapy
- b. How orthodontics can enhance your restorative and cosmetic care in addition to providing a valuable tool in treating children

II. Making the Diagnosis

- a. What data do you need and why
- b. Using the flow charts to differentiate the easy from the difficult problems to correct

III. Early treatment in children

- a. New approaches to space maintenance for missing primary molars and why it may not be necessary for first primary molars
- b. Extracted primary anteriors in the 2 to 5 year old. Space maintenance may not be necessary but Mothers want esthetics. The answer: the Groper fixed appliance
- c. How to treat anterior crossbites in 3-8 weeks

IV. Ectopic Eruption of the 6-year molars

- a. How to intercept
- b. When the 2nd primary molars

are lost early – how to regain the space and maintain it until the bicuspid erupt

V. Posterior Crossbites

- a. When to treat and how to treat in the primary, mixed and early permanent dentition.
- b. Why you should not attempt to treat posterior crossbites in adults with simple appliances

VI. Molar uprighting

- a. The causes of tipped first molars
- b. Fixed vs. removable approaches
- c. Methods of retention

VII. Forced eruption

- a. Choosing the right procedure – forced eruption/crown-lengthening vs. extraction
- b. Achieving an esthetic result

VIII. Practice Management

- a. The importance of good records – digital photos, digital X-rays and digital models
- b. Consent forms and sample letters
- c. Finances – managing fees and insurance
